Subject: Questions

Sounds like you have the continued river monitoring issue handled already. I'll ask Dave G. what you all decided.

A few other things:

1. Our reclamation area just increased significantly with addition of the hillsides. I'll be getting more materials requirements to Matt as soon as Megan confirms the mapped area I sent. Those slopes are interesting. Can we rip in the amendments? Is the "standard" for reclamation what is already there in the undisturbed areas?
2. Do you still want input on potential remote sensing? (Craig had Anne send me some questions but I think Craig was tied up with other site activities when I asked for clarification.)
3. Are flumes being installed either at CC06 or Gladstone?
4. The dissolved copper concentrations measured using the Hach kit are strongly correlated to ponds pH. Do you want to continue the Hach D-Cu analysis 2x/day or not? (You can just let Megan know the answer since she's running the tests.)
5. Do you need my input for the next 4 days? I could do something else from Thurs-Sunday but GK is the priority. Especially since I hear strong El Nino impacts are about to descend.

Hi, Steve.

Did you want any input on monitoring now that the Durango team has discontinued regular sampling?
